1.5 acres

\* measured in  
optimum conditions

Note: Rated for outdoor use only

Mega-Catch™ - makers of the world's most advanced mosquito traps - introduce the latest product of their technological innovation: the PRO 900 Series.

There are more than 3,500 species of mosquitoes worldwide. Each species is unique and each is attracted by different combinations of sensory stimuli including different spectrum frequencies and different by-products of human and animal activity like perspiration. Even miniscule changes in the concentration of these stimuli can have an impact. In almost all cases it is important that stimuli fluctuate rather than be static in order to mimic human activity.

The new patent pending Mega-Catch™ PRO 900 Series ULTRA mosquito trap has been specifically designed with all these issues in mind.

PRO 900 Series ULTRA mosquito traps mimic a range of attractant stimuli designed to lure mosquitoes and other common biting insects from as far away as 150 feet.

The PRO 900 Series ULTRA incorporates all the sophisticated design features of the PREMIER XC plus Mega-Catch's™ patented Variable Quantity Slow CO<sub>2</sub> Gas Release System (use optional) which can increase capture rates of mosquitoes by as much as 300-400%.

Mega-Catch™ PRO 900 Series ULTRA mosquito traps come fully assembled - simply position, connect to power, switch on and let Mega-Catch™ go to work.

## Features

- PRO 900 Series ULTRA Mosquito Traps successfully mimic the sensory signals which attract mosquitoes and other common biting insects like sand flies, black flies and biting midges (no-see-ums)
- Revolutionary MAS (Mosquito-Attracting-Stimuli) settings can be fine-tuned to maximize capture rates and target specific mosquito species
- Economical operation - uses less power than a 40 Watt light bulb
- Programmable to multiple operational settings with the set and forget digital timer
- Designed to be self-serviceable with on-board diagnostics check
- Variable fan speed settings enable live catches (for species identification)
- Safe 12 Volt 60-foot output cord (from weather proof power supply to trap). The ULTRA can be plugged into any mains power outlet
- Universal input voltage for use anywhere in the world
- Designed to work with or without attractant lures
- Includes easy press 'n go option

# Freedom to Enjoy the Outdoors

There are over 125 mosquito species with documented resistance to one or more insecticides. [ CDC, 2008 ]

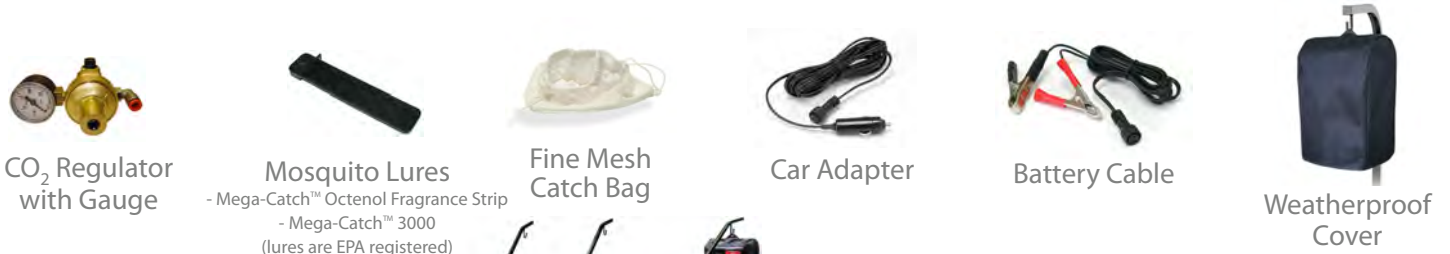

Unlike conventional mosquito traps which rely on various chemicals to attract mosquitoes, Mega-Catch™ traps employ a wide range of stimuli to lure and capture mosquitoes.

Reclaim your yard with a Mega-Catch™ PRO 900 series mosquito trap - the #1 choice for safe, effective and environmentally friendly mosquito control.
